PROFESSIONAL SUMMARY

Motivated Junior Full Stack Developer and Software Engineering student at Injibara University, with hands-on experience building complete web applications using React, Node.js and MySQL. Skilled in both frontend and backend development, and in designing clean user interfaces with Figma and Tailwind CSS. Passionate about solving real local problems with practical, user-friendly software.

PROJECTS

- **Ethio Clothes Market**
  Online marketplace for Ethiopian traditional and modern clothing, with product listings and ordering.
- **Text-to-Speech Application**
  Web application that converts written text into spoken audio for easier access to content.
- **School Management System**
  Manages students, teachers, classes and records in one centralized system.
- **Restaurant Management System**
  Handles menu, orders and daily restaurant operations digitally.
- **Health Center Payment System**
  Simplifies payment handling and record keeping for health center services.
- **University Dormitory Placement System**
  Automates and organizes student dormitory allocation at the university.

TECHNICAL STACK

Frontend: React, HTML, CSS, Tailwind CSS | Backend: Node.js | Database: MySQL | Design: Figma
